

# Package ‘arpr’

October 12, 2022

**Type** Package

**Title** Advanced R Pipes

**Version** 0.1.2

**Description** Provides convenience functions for programming with 'magrittr' pipes. Conditional pipes, a string prefixer and a function to pipe the given object into a specific argument given by character name are currently supported. It is named after the dadaist Hans Arp, a friend of Rene Magritte.

**License** GPL (>= 3)

**URL** <https://github.com/statnmap/arpr>

**BugReports** <https://github.com/statnmap/arpr/issues>

**Imports** magrittr, rlang

**Suggests** testthat (>= 3.0.0)

**Config/testthat/edition** 3

**Encoding** UTF-8

**RoxygenNote** 7.1.1

**NeedsCompilation** no

**Author** Jirka Lewandowski [aut],  
Sébastien Rochette [aut, cre] (<<https://orcid.org/0000-0002-1565-9313>>)

**Maintainer** Sébastien Rochette <[sebastien@thinkr.fr](mailto:sebastien@thinkr.fr)>

**Repository** CRAN

**Date/Publication** 2021-08-02 15:50:05 UTC

## R topics documented:

browse_r . . . . .	2
const . . . . .	2
iff . . . . .	3
pipe_into . . . . .	4
prefix . . . . .	5
prefix_path . . . . .	5
remove_names . . . . .	6

**Index**[7](#)

---

browse_r	<i>browser() in a magrittr pipe</i>
----------	-------------------------------------

---

**Description**

browser() in a magrittr pipe

**Usage**

```
browse_r(x, ...)
```

**Arguments**

x	input
...	passed on to browser()

**Value**

Used for side effect. Open a browser inside the pipe workflow.

---

const	<i>Create a constant function</i>
-------	-----------------------------------

---

**Description**

Create a constant function

**Usage**

```
const(val = NULL)
```

**Arguments**

val	return value of constant function (defaults to NULL)
-----	--

**Value**

A function always returning val accepting arbitrary arguments (dots)

---

`iff`*Apply a function depending on test output*

---

**Description**

`iff` returns output of the function if and only if test is TRUE. `iffn` returns output of the function if and only if test is FALSE. They return the original value otherwise. `iffelse` returns output of the first function if test is TRUE, output of the second function otherwise.

**Usage**

```
iff(obj, test, fun, ...)
```

```
iffn(obj, test, fun, ...)
```

```
iffelse(obj, test, true_fun, false_fun, ...)
```

**Arguments**

<code>obj</code>	object to apply test and fun to
<code>test</code>	logical or function to apply to test
<code>fun</code>	function to apply
<code>...</code>	passed on to test
<code>true_fun</code>	function to apply when test is true
<code>false_fun</code>	function to apply when test is false

**Value**

Output of function `fun` applied to the original value or the original value, depending on the test.

**Examples**

```
x <- 1
x %>%
  iff(is.na, const(0))
x <- NA
x %>%
  iff(is.na, const(0))

x <- 1
x %>%
  iff(x <= 0, function(x) { x - 2 })
x <- -1
x %>%
  iff(x <= 0, function(x) { x - 2 })

x <- NA
```

```
x %>%  
  iffn(is.na, exp)  
x <- 10  
x %>%  
  iffn(is.na, exp)
```

---

pipe\_into

*Pipe into specific formal argument*

---

### Description

This rotates the order of the arguments such that the one named in `param_name` comes first and then calls the function.

### Usage

```
pipe_into(x, param_name, fun, ...)
```

### Arguments

<code>x</code>	value to be piped into fun
<code>param_name</code>	name of the argument that x should be assigned to
<code>fun</code>	function
<code>...</code>	further arguments for fun

### Value

Output of fun.

### Examples

```
require(magrittr)  
5L %>%  
  pipe_into("digits", format, 2.731234567)
```

---

prefix	<i>Prefix a string of text</i>
--------	--------------------------------

---

**Description**

Convenience function to use with magrittr wraps `paste0()`, hence vectorised as `paste0()`

**Usage**

```
prefix(text, ...)
```

**Arguments**

text	goes to the end, rest
...	goes to the front.

**Value**

Character. Character chain with the prefix added.

**Examples**

```
require(magrittr)
"xyz" %>%
  prefix("abc")
```

---

prefix_path	<i>Prefix a path</i>
-------------	----------------------

---

**Description**

file.path with arguments reversed

**Usage**

```
prefix_path(path, prefix, ...)
```

**Arguments**

path	path to be prefixed
prefix	path to be appended before
...	passed on to file.path

**Value**

```
file.path(prefix, path, ...)
```

---

remove_names	<i>Remove names of an object</i>
--------------	----------------------------------

---

**Description**

Remove names of an object

**Usage**

```
remove_names(x)
```

**Arguments**

x                    object to unname

**Value**

x without names.
